

Integrated Avionics Maintenance Trainer

Introduction

The Integrated Avionics Maintenance Trainer (IAMT) is a Part Task Trainer (PTT) that enables maintenance tasks to be taught by either instructor demonstration or independent, practical exercises by the student.

Students can perform a range of practical training exercises, enabling a progressive understanding of the fundamental principles of modern integrated avionics systems.

The IAMT leverages the fully integrated aircraft systems software simulation that underpins Pennant's desktop emulation trainer to provide consistent, real-time aircraft responses to user interactions and access to virtual Ground Support Equipment and Special Tools and Test Equipment (GSE and STTE).

Key Features

- High fidelity simulated cockpit;
- Partial aircraft structure;
- Functional testing of aircraft and fault finding systems;
- Operation of avionic systems and their controls;
- Removal and Installation (R&I) of aircraft LRUs;
- Instructor Operating Station (IOS) for fault insertion and aircraft parameter setting;
- Virtual GSE and STTE;
- Aircraft technical publications suite for the generic aircraft;
- No security restrictions e.g. ITAR;
- Extensive use of COTS equipment;
- Simulated and replica components.

Electrical Specifications

PARTICULAR	NOMINAL	UNIT
Supply Voltage	220 / 240	Vac
Frequency	50 / 60	Hz
Maximum Current	5	A

Supplied Documentation

Operation Manual
Maintenance Manual
Student Manual (Technical Publication)

Optional Accessories

Student Toolkit
Spares Kit
Consumables Starter Pack
Bolt-on systems, Engine Start, Refuel/Defuel
