### **Launch of Auxilium Phase 3**

#### ***Major Step in the Auxilium Product Roadmap***

Pennant International Group plc (AIM: PEN), the systems support software and training solutions company is pleased to announce the next major step in the Auxilium product roadmap - the launch of Auxilium Phase 3. This significant product upgrade reflects the successful investment made into the Auxilium software suite, broadening the Group's capability and strengthening its customer proposition.

Auxilium is designed to provide customers with a powerful, unified toolset to manage, model and exploit complex systems data at scale. This most recent release of Auxilium now delivers an Integrated Product Support environment across the three applications - GenS. Analyzer and R4i. For the first time, customers can operate from a unified server and shared data environment, eliminating fragmentation and enabling true end-to-end supportability engineering and technical publications workflows.

Auxilium Phase 3 delivers three major benefits:

- Enhanced security - a stronger, modernised security framework giving businesses and IT teams greater confidence and peace of mind
- Faster and smoother user experience - customers will notice immediate performance improvements and more efficient workflows across the entire Auxilium suite
- A future-ready foundation - Phase 3 establishes a scalable platform that enables continuous enhancements and rapid delivery of new capabilities that will directly benefit users

#### **Phil Walker, CEO of Pennant International Group plc, commented:**

"Auxilium Phase 3 now brings new capabilities to our customers, offering enhanced security, streamlined performance, and a scalable foundation for continuous development."

#### **Notes to editors:**

Pennant International Group plc (AIM: PEN) is a technology driven, leading global provider of system support software and services, technical services, and training solutions. It supports its global customer base in the design, development, operation, maintenance, and training of complex assets, to maximise operational and maintenance efficiency.

Its key markets include Aerospace, Defence and Rail, and adjacent safety-critical markets such as Shipping, Nuclear and Space.

The Group addresses the market through three key business segments:

- Auxilium software: a key generator of recurring revenues through the provision of a suite of software tools designed to help clients: manage and use complex data; ensure equipment availability at optimal cost; and comply with industry standards. Its Integrated Product Support (IPS) and Integrated Logistics Support (ILS) software and services equips customers with powerful market-leading toolsets to manage, model and utilise complex equipment data.
- Technical Services: drives repeatable revenues through expert support for users of Pennant and third-party solutions including consultancy, support and maintenance, training and bespoke development.
- Training Systems: project-based revenues relating to the design and build of hardware, software and virtual training solutions for maintainers and operators of aircraft, ships and land systems.

Pennant is strategically focused on sustainable recurring and repeatable revenues and profitability growth, shifting its model towards high margin software and services. Against a climate of rising defence budgets and the burgeoning technological complexity of military, aviation and rail platforms, the demand for these solutions is expected to grow substantially.

Headquartered in Cheltenham, UK, the Group operates worldwide, with offices in the UK, North America and Asia-Pacific, serving markets with high barriers to entry often in regulated industries.
